North-Holland

# Subject index of Volume 102*

*Boundary element methods*

Boundary element modelling: Near surface excavations, J.L. Meek and C. Dai (1) 15– 27
A comparison of boundary integral methods for studying the motion of a two-dimensional bubble in an infinite fluid, J.M. Boulton-Stone (2) 213–234

*Control theory*

Optimal control of open boundary conditions for a numerical tidal model, R.W. Lardner (3) 367–387

*Dynamics*

Three-dimensional characterization of the nearfield of a VSTOL jet in turbulent crossflow, A.J. Baker, P.K. Snyder and J.A. Orzechowski (1) 1– 13

*Elasticity*

Elementary applications of MATHEMATICA to the solution of elasticity problems by the finite element method, N.I. Ioakimidis (1) 29– 40
An arbitrary Lagrangian–Eulerian finite element method for incompressible hyperelasticity, T. Yamada and F. Kikuchi (2) 149–177
A Galerkin approximation for curved beams, I.N. Figueiredo and L. Trabucho (2) 235–253
Ring-element analysis of layered orthotropic bodies, O. Jørgensen (3) 319–336

*Electromagnetic fields*

Numerical optimization of a photocell, Y. Achdou (1) 89–106

*Finite element and matrix methods*

Elementary applications of MATHEMATICA to the solution of elasticity problems by the finite element method, N.I. Ioakimidis (1) 29– 40
Two-dimensional viscous flow computations on the Connection Machine: Unstructured meshes, upwind schemes and massively parallel computations, C. Farhat, L. Fezoui and S. Lanteri (1) 61– 88

* The issue number is given in front of the page numbers.

Numerical optimization of a photocell, Y. Achdou (1) 89–106
An arbitrary Lagrangian–Eulerian finite element method for incompressible hyperelasticity, T. Yamada and F. Kikuchi (2) 149–177
Convergence and stability analyses of multi-time step algorithm for parabolic systems, T. Belytschko and Y.Y. Lu (2) 179–198
Optimal least-squares finite element method for elliptic problems, B.-N. Jiang and L.A. Povinelli (2) 199–212
$\mathscr{C}^1$-curved finite elements with numerical integration for thin plate and thin shell problems, Part 1: Construction and interpolation properties of curved $\mathscr{C}^1$ finite elements, M. Bernadou (2) 255–289
Ring-element analysis of layered orthotropic bodies, O. Jørgensen (3) 319–336
$\mathscr{C}^1$-curved finite elements with numerical integration for thin plate and thin shell problems, Part 2: Approximation of thin plate and thin shell problems, M. Bernadou (3) 389–421

*Fluid mechanics*

Three-dimensional characterization of the nearfield of a VSTOL jet in turbulent crossflow, A.J. Baker, P.K. Snyder and J.A. Orzechowski (1) 1– 13
Two-dimensional viscous flow computations on the Connection Machine: Unstructured meshes, upwind schemes and massively parallel computations, C. Farhat, L. Fezoui and S. Lanteri (1) 61– 88
The node-centred finite volume approach: Bridge between finite differences and finite elements, V. Selmin (1) 107–138
A comparison of boundary integral methods for studying the motion of a two-dimensional bubble in an infinite fluid, J.M. Boulton-Stone (2) 213–234
Optimal control of open boundary conditions for a numerical tidal model, R.W. Lardner (3) 367–387

*Gas dynamics*

The node-centred finite volume approach: Bridge between finite differences and finite elements, V. Selmin (1) 107–138

*General Raleigh–Ritz and Galerkin techniques*

Multiple scaling method for the calculation of threaded assemblies, S. Andrieux and A. Leger (3) 293–317

*Heat and diffusion*

Convergence and stability analyses of multi-time step algorithm for parabolic systems, T. Belytschko and Y.Y. Lu (2) 179–198

*Kinematics*

Three-dimensional characterization of the nearfield of a VSTOL jet in turbulent crossflow, A.J. Baker, P.K. Snyder and J.A. Orzechowski (1) 1– 13
Computerized simulation of meshing and contact of enveloping gear tooth surfaces, F.L. Litvin and C.-L. Hsiao (3) 337–366

*Nonlinear mechanics*

An arbitrary Lagrangian–Eulerian finite element method for incompressible hyperelasticity, T. Yamada and F. Kikuchi (2) 149–177

*Numerical solution procedures*

Elementary applications of MATHEMATICA to the solution of elasticity problems by the finite element method, N.I. Ioakimidis (1) 29– 40
The node-centred finite volume approach: Bridge between finite differences and finite elements, V. Selmin (1) 107–138
Convergence and stability analyses of multi-time step algorithm for parabolic systems, T. Belytschko and Y.Y. Lu (2) 179–198
Optimal least-squares finite element method for elliptic problems, B.-N. Jiang and L.A. Povinelli (2) 199–212
A comparison of boundary integral methods for studying the motion of a two-dimensional bubble in an infinite fluid, J.M. Boulton-Stone (2) 213–234
A Galerkin approximation for curved beams, I.N. Figueiredo and L. Trabucho (2) 235–253
Multiple scaling method for the calculation of threaded assemblies, S. Andrieux and A. Leger (3) 293–317

*Optimization*

Shape design sensitivity analysis of thermoelasticity problems, R.J. Yang (1) 41– 60
Optimal control of open boundary conditions for a numerical tidal model, R.W. Lardner (3) 367–387

*Optimization and design of structures*

Shape design sensitivity analysis of thermoelasticity problems, R.J. Yang (1) 41– 60
Numerical optimization of a photocell, Y. Achdou (1) 89–106

*Shells and plates*

$\mathscr{C}^1$-curved finite elements with numerical integration for thin plate and thin shell problems, Part 1: Construction and interpolation properties of curved $\mathscr{C}^1$ finite elements, M. Bernadou (2) 255–289

Ring-element analysis of layered orthotropic bodies, O. Jørgensen (3) 319–336
$\mathscr{C}^1$-curved finite elements with numerical integration for thin plate and thin shell problems, Part 2: Approximation of thin plate and thin shell problems, M. Bernadou (3) 389–421

*Solution of differential equations*

The node-centred finite volume approach: Bridge between finite differences and finite elements, V. Selmin (1) 107–138

*Stability in fluid dynamics*

A comparison of boundary integral methods for studying the motion of a two-dimensional bubble in an infinite fluid, J.M. Boulton-Stone (2) 213–234

*Structural mechanics*

A Galerkin approximation for curved beams, I.N. Figueiredo and L. Trabucho (2) 235–253
Multiple scaling method for the calculation of threaded assemblies, S. Andrieux and A. Leger (3) 293–317
Ring-element analysis of layered orthotropic bodies, O. Jørgensen (3) 319–336

*Subsonic flow*

Three-dimensional characterization of the nearfield of a VSTOL jet in turbulent crossflow, A.J. Baker, P.K. Snyder and J.A. Orzechowski (1) 1– 13

*Systems of linear and nonlinear simultaneous equations*

Elementary applications of MATHEMATICA to the solution of elasticity problems by the finite element method, N.I. Ioakimidis (1) 29– 40
Shape design sensitivity analysis of thermoelasticity problems, R.J. Yang (1) 41– 60

*Transonic flow*

Two-dimensional viscous flow computations on the Connection Machine: Unstructured meshes, upwind schemes and massively parallel computations, C. Farhat, L. Fezoui and S. Lanteri (1) 61– 88
The node-centred finite volume approach: Bridge between finite differences and finite elements, V. Selmin (1) 107–138

*Turbulence*

Three-dimensional characterization of the nearfield of a VSTOL jet in turbulent crossflow, A.J. Baker, P.K. Snyder and J.A. Orzechowski (1) 1– 13

*Viscous flow*

Two-dimensional viscous flow computations on the Connection Machine: Unstructured meshes, upwind schemes and massively parallel computations, C. Farhat, L. Fezoui and S. Lanteri (1) 61– 88
